Angus Glen Golf Club in Markham, Ontario Canada, the highly-popular Toronto area golf course and host of the 2007 Canadian Open was approached in the fall of 2006 with the concept of installing the EvenGLO® patio

heaters as an enhancement to the existing outdoor hospitality area. "We were concerned with the esthetics of our unique clubhouse as we entertained a solution for our primary patio space" recalled general manager Kevin Thistle.

evenGLO™
RADIANT PATIO HEATER

With the support of Enbridge Gas Distribution and IR Energy Inc, four EvenGLO® infrared patio heaters were supplied and installed during the spring of 2007. The patented EvenGLO pole mounted heaters were piped and wired in a permanent configuration that best suited the Angus Glen table design and layout. The 53,000 Btu heaters provide two output settings, high and low, “the heaters make it possible to enjoy the outdoor patio not just from mid-June to August, but also in the shoulder months – April, May, early June, September and October – thereby increasing revenue” says Jason. “The heaters are a welcomed addition to our patio space. I’ve had nothing but good comments from the guests.”

The EvenGLO® Experience on the Golf Club Patio

Efficiency The energy efficient EvenGLO® heaters consume less fuel than traditional patio heaters providing comfort control technology and a balanced radiant heat output. “We installed a check meter as part of the overall project. The meter was last recorded in July 2008, and we were pleased with the gas consumption and fuel savings” said Enbridge sales representative Murray Wilson. The EvenGLO design supplies greater comfort requiring fewer units to do the job, resulting in lower installation costs and reduced operating expenses. “The EvenGLO has proven to be efficient in its service, and the unobtrusive design has incorporated well with our ambiance and

clubhouse architecture” commented Kevin Thistle. A side benefit of having a well-heated outdoor patio is being able to accommodate guests who wish to smoke after a meal or round of golf, added Braganza. Although regulations prohibit indoor smoking, smokers are often free to light up in designated outdoor patio areas generally set aside from non-smoking patrons. “The opportunity to utilize the EvenGLO has been a tremendous benefit to our outdoor hospitality business. The ability to operate in cooler weather conditions not only provides comfort to our customers, it also extends the life of our patio season, thereby providing an additional source of revenue” summarized Braganza.
